South Coast Outpatient Surgery Center requires that ALL MEDICAL AND ALLIED HEALTH PROFESSIONALS participate in annual screening for tuberculosis according to local, state and federal guidelines. Failure to provide the required information by the specified time frame will result in voluntary resignation from staff.

**ALL STAFF MUST COMPLETE THE FOLLOWING TB SCREENING SYMPTOM REVIEW.**

Do you currently have symptoms of:

1. Unusual fatigue for more than two weeks
2. Weight Loss (unrelated to dieting)
3. Loss of appetite for more than two weeks.
4. Persistent cough longer than a two-week duration
5. Coughing up blood.
6. Fever associated with cough for more than one week.
7. Night sweats.
8. Have you ever had BCG vaccine before age ?? **
   ** Most often given to children outside the USA.

Public Health requires TB skin testing (PPD) regardless of BCG vaccine.

I certify to the best of my knowledge that the above statements are true.

**NEGATIVE PPD SKIN TEST** – If you have a history of negative PPD skin testing, you must obtain an annual PPD skin test. You may receive this test free of charge at our surgery center, you may have the test administered in your office, or you may submit testing from another facility as long as it was interpreted within the past year. You may also read your own test results if you are a Medical Staff member, RNFA, Nurse Practitioner or Physician Assistant. Remember, the test must be interpreted within 48 – 72 hours after it is administered in order to be valid. Any PPD skin reaction of 10mm or more will be forwarded to the Medical Staff administration for follow up and discussion of special testing options.

*If you choose to read your own test, please complete the box below:*

</tr>
</tbody>
</table>

**HISTORY OF POSITIVE PPD SKIN TEST** – If you have a history of positive PPD skin testing, you will be required to obtain a chest x-ray or body scan that includes the chest. Chest x-rays and body scans are valid for four years. You may obtain a chest x-ray from a Radiology Department of any facility in the U.S.A. Results are acceptable if they were performed within the past four years. You are required to submit a copy of the chest x-ray / body scan results to the Medical Staff Office along with this screening form.
